## About

Senior .NET Engineer and Team Lead with 9+ years building and scaling enterprise backends across FinTech (mortgage lending), iGaming, and high-load e-commerce. Specialize in decomposing monoliths into microservices on .NET Core and Azure, and in the distributed-systems plumbing behind them — Apache Kafka, Redis, event-driven messaging, and RESTful APIs. Led a 7-person cross-functional team through a full monolith-to-microservices migration at Interfirst Mortgage; currently building authentication (SSO) and real-time WebSocket services at Slotegrator. Microsoft-certified Azure Developer Associate and Azure DevOps Engineer Expert.

## Experience

**April 2024 - Present**

### Senior Software Engineer (.NET)

Design, build, and own backend microservices end-to-end for a high-traffic iGaming platform — authentication (SSO), real-time delivery (WebSocket), responsible-gaming player limits, and metadata/configuration aggregation — on .NET Core with Clean Architecture and DDD.

Build and maintain a centralized Single Sign-On service that unifies authentication across the platform's products, eliminating duplicated auth logic and standardizing token issuance and session management; configured OAuth 2.0 / OpenID Connect flows across the in-house SSO service and Keycloak.

Delivered a real-time WebSocket service that consumes events and messages from other backend services and pushes them to end users in the browser at low latency, using a Redis backplane and Kafka event streams to scale fan-out across thousands of concurrent connections.

Implemented the player-limit service enforcing responsible-gaming controls (deposit, loss, and session limits) via event-driven rules over Kafka.

Built a metadata aggregation and configuration service that centralizes shared configuration and metadata for consuming services.

Integrate services through event-driven messaging (Kafka) and shared caching (Redis) across PostgreSQL and MongoDB stores; refactor legacy services to microservice patterns, reducing coupling and improving testability.

Drive code reviews, technical design discussions, and mentoring as a senior engineer on the team.

**April 2021 - April 2024**

### Team Lead / Senior .NET Engineer

Led a cross-functional team of 7 (5 engineers, QA, BA) modernizing a US mortgage-lending platform from a monolith to microservices.

Drove the monolith-to-microservices decomposition, extracting 4 independently deployable services and shortening the release cycle from monthly to weekly.

Owned architecture decisions, code reviews, and delivery planning; introduced end-to-end solution testing in Docker and performance profiling with BenchmarkDotNet, improving runtime performance by ~25% and cutting regression defects by 20%.

Partnered directly with US client stakeholders to translate business requirements into architectural solutions and delivery roadmaps.

**June 2020 - April 2021**

### **Senior Software Engineer / Acting Team Lead**

Led a team of 4 delivering application logic and new services for a high-traffic auto-parts trading platform.

Integrated Azure services (Functions, Storage, Data Factory, Application Insights) to improve observability and cut infrastructure costs by ~50%.

Established unit and integration testing across the codebase, reducing production regressions by 15% and improving release confidence.

**December 2018 - June 2020**

### **Software Engineer**

Built core services for a complex auto-parts trading platform over intricate relational schemas; contributed to architecture, feature decomposition, and task planning.

Delivered internal applications for expert and operations departments, streamlining day-to-day workflows.

**September 2016 - December 2018**

### **Junior Software Engineer**

Built a high-load parsing and ingestion system using parallelism and multithreading to process thousands of linked data sets and images reliably at scale.

Extended WPF desktop and web analytics applications; performed profiling, optimization, and refactoring to improve throughput.

Authored and maintained technical documentation to support the development process.

## **Education**

### **Computer Academy STEP**

**2012 - 2015**

Coursework

# Computer Science

## Skills

### Languages

- C#
- SQL (T-SQL)
- JavaScript

### .NET Stack

- .NET Core / .NET 8
- ASP.NET Core
- Web API
- Entity Framework Core
- WPF
- WCF
- ADO.NET

### Architecture

- Microservices
- Distributed Systems
- Domain-Driven Design (DDD)
- Clean Architecture
- Event-Driven Architecture
- SOLID
- OOP
- Design Patterns

### Cloud & DevOps

- Microsoft Azure
- Azure Functions
- Azure Storage
- Application Insights
- Data Factory
- Azure DevOps
- Docker
- CI/CD
- Git

### Data & Messaging

- MS SQL Server
- PostgreSQL
- MongoDB
- Redis
- Apache Kafka
- RabbitMQ

### APIs & Protocols

- REST
- WebSockets
- OAuth 2.0 / OpenID Connect
- Keycloak
- Single Sign-On (SSO)

### Testing & Quality

- Unit & Integration Testing
- Test-Driven Development (TDD)
- Code Review

### Leadership

- Team Leadership
- Mentoring
- Agile / Scrum
- Stakeholder Management

## Languages

- English
- Ukrainian
- Russian
- Bulgarian
- C1
- Native
- Fluent
- A2
